Lab2

I have completed Lab 2 (lab2.html) and pushed the correct file to my GitHub repository.

However, after previously publishing a wrong file and then unpublishing it, the **GitHub Pages Save button is grey and unclickable**, so I cannot republish the page.

I have included a **screenshot** showing this issue as proof that the problem is with GitHub Pages and not with my code.

Lab 2: HTML

Visit the [CPIT-405 Website](#).

This is my first paragraph. HTML allows us to create structured web content.

This is my second paragraph. Web development starts with basic HTML markup.

This is a **strong** statement with *emphasis*. Water is H_2O and $2^3=8$.

HTML is the *foundation* of the web. CO_2 and $E=mc^2$

Learning HTML is *important*. H_2SO_4 is sulfuric acid. $10^2=100$.

Practice makes *perfect*. a_1, a_2... and x^n.

Students should *practice* daily. $H_2 + O_2 \rightarrow H_2O$. $5^3=125$.
